How to use this document

Column	Meaning
ID	Unique test case identifier

Column	Meaning
Area	Product domain
Given	Preconditions
When	Action
Then	Expected result / pass criteria
Priority	P1 = release blocker, P2 = important, P3 = nice-to-have

Record **Pass / Fail / Blocked / N/A**, tester name, date, build version, and notes for each case.

1. Auth, onboarding & core navigation

ID	Area	Given	When	Then	Priority
AUTH-01	Auth	Valid credentials	Sign in via email/password	User lands on Home; session persists	P1
AUTH-02	Auth	New user	Sign up	Account created; onboarding or empty Home	P1
AUTH-03	Onboarding	New user, no pets	Complete add-first-pet flow (steps 1–9)	Pet saved; appears on Home with pet email	P1
AUTH-04	Onboarding	New user	Skip optional steps (DOB, weight, ID)	Pet still saves successfully	P2
AUTH-05	Navigation	Signed-in user	Navigate all bottom tabs	Home, Messages, Milo, Profile load without crash	P1
AUTH-06	Auth	Signed out	Open protected route	Redirect to sign-in	P1

2. Pet email processing — inbound & sender gate

Source: *docs/EMAIL-PROCESSING-UAT.md §11*

ID	Area	Given	When	Then	Priority
IN-01	Email inbound	Pet exists; sender whitelisted; valid vaccination PDF matching pet	Vet emails PDF to pet address	processed_emails: success=true, review_status=resolved; record in health/vault; push email_processed; no Processing errors	P1
IN-02	Email inbound	Unknown sender; email has PDF	Webhook fires	pending_email_approvals.status=pending; JSON in pending-emails; push email_approval; no processed_emails yet	P1

ID	Area	Given	When	Then	Priority
IN-03	Email inbound	IN-02 pending approval	User taps Approve	Sender whitelisted; email processed; records filed; approval approved	P1
IN-04	Email inbound	Unknown sender	User taps Reject	Approval rejected; sender blocked; future mail from sender → 403	P1
IN-05	Email inbound	Sender blocked in safe senders	Webhook fires	403; no processed_emails row	P1
IN-06	Email inbound	Invalid Mailgun signature	Webhook fires	401; no DB changes	P2
IN-07	Email inbound	Recipient not mapped to any pet	Webhook fires	404	P2
IN-08	Email inbound	Same Message-Id delivered twice within seconds	Second webhook	200 "Email already processed"; no duplicate records	P1
IN-09	Email inbound	Email with no attachments (body only)	Webhook	success=true, resolved; no Review Inbox	P2
IN-10	Email inbound	Care team vet email linked to pet	Inbound from vet	No approval step; processes immediately	P1

3. Pet email processing — Review Inbox

Source: *docs/EMAIL-PROCESSING-UAT.md §11*

ID	Area	Given	When	Then	Priority
RI-01	Review Inbox	Whitelisted sender; PDF breed/name does not match pet	Webhook	success=false, review_status=pending, failure_reason populated; JSON stored; Processing errors (1)	P1
RI-02	Review Inbox	RI-01 row in inbox	User opens item	Failure summary visible; attachment preview works if JSON has bodies	P1
RI-03	Review Inbox	RI-01; user fixes pet profile OR picks correct pet on confirm	Confirm as Vaccine	200; review_status=resolved; vaccine record exists; "Record filed!"	P1
RI-04	Review Inbox	RI-01 row	User dismisses	review_status=dismissed; leaves inbox; records unchanged	P1
RI-05	Review Inbox	Row dismissed	User opens Messages	Item not in Processing errors	P1
RI-06	Review Inbox	Metadata-only JSON (large email stripped bodies)	Preview attachment	Unavailable / ATTACHMENT_BODY_NOT_ARCHIVED	P2
RI-07	Review Inbox	JSON deleted from pending-emails	Confirm	422 or edge failure; row stays pending	P2

4. Pet email processing — resolve API & reprocess

Source: docs/EMAIL-PROCESSING-UAT.md §11

ID	Area	Given	When	Then	Priority
RP-01	Resolve API	Valid Review Inbox row + stored JSON + secrets configured	Confirm Lab	Record filed; resolved	P1
RP-02	Resolve API	Edge missing PAWBUCK_API_URL	Confirm	422 or pipeline failure; stays pending	P2
RP-03	Resolve API	Row already resolved	Confirm	409 already marked successfully processed	P2
RP-04	Resolve API	Row dismissed	Confirm	409 already dismissed	P2
RP-05	Resolve API	Double-tap Confirm while first run in progress	Second request	409 “currently being processed” (expected)	P2
RP-06	Resolve API	Wrong pet selected (not owner)	API call	403	P2

5. Admin portal — email & support ops

Source: docs/EMAIL-PROCESSING-UAT.md §11; admin routes in docs/design/ADMIN_PORTAL_REDESIGN.md

ID	Area	Given	When	Then	Priority
AD-01	Admin	Multiple pending failures in date range	Bulk dismiss (dry run → execute)	Rows dismissed; consumer inbox count drops	P1
AD-02	Admin	Failures with stored JSON	Bulk reprocess (10 batch)	Records filed; rows resolved	P1
AD-03	Admin	Failures	Bulk resolve without reprocess	review_status=resolved but no new health records	P1
AD-04	Admin	Dismissed row	Bulk reprocess with includeDismissed	Can reprocess (admin only)	P2
AD-05	Admin	API or Edge not configured	Email ops → Check pipeline health	Red checks with hints; green when secrets aligned	P1
AD-06	Admin	Row stuck status=processing	Email ops → Unlock or Mail errors detail Unlock stuck email	Row becomes completed; owner Confirm or admin file works	P1
AD-07	Admin	Owner email known, stored archive	Email ops → Add records to pet profile	Health records filed; row resolved	P1
AD-08	Admin	Backlog after config fix	Email ops → File all ready or Mail errors File all ready	Batches until eligible=0	P1

ID	Area	Given	When	Then	Priority
AD-09	Admin	Noise / already handled	Email ops → Remove from app	Dismissed; no new health records	P2
AD-10	Admin	Quality tracking	Processing tab date range	Success rate, failure categories, first/last seen dates	P2
AD-11	Admin	Support JWT with admin role	Open /email/inbox row detail	Diagnostics show consumer visibility, archive status, recommended action	P1
AD-12	Admin	Support user	Command center /home	Metrics and queue summary load	P2

6. Email processing — production smoke

Source: *docs/EMAIL-PROCESSING-UAT.md §11*

ID	Area	Step	Pass criteria	Priority
E2E-01	Email smoke	Send test vaccine PDF from whitelisted sender	Auto-filed within 2 min	P1
E2E-02	Email smoke	Send from unknown sender → approve	Files after approval	P1
E2E-03	Email smoke	Force validation failure → Confirm in app	“Record filed!” and record visible	P1
E2E-04	Email smoke	Admin preview attachment for failed row	PDF renders or clear error code	P1

7. Family sharing & household access

Source: *docs/TESTING_FAMILY_SHARING.md*

Owner (sender)

ID	Area	Given	When	Then	Priority
FS-01	Family sharing	Free account	Create household MTCH or email invite	Prompt Family plan (family_access_invite)	P1
FS-02	Family sharing	Individual account	Create invite	Blocked	P1
FS-03	Family sharing	Family account	Create invite	Succeeds	P1

ID	Area	Given	When	Then	Priority
FS-04	Family sharing	Family account, pet selected	Send email invite with role	Invite sent; recipient can accept	P1
FS-05	Family sharing	Family account	Generate MTCH code	Copy/QR works	P1
FS-06	Family sharing	Member joined	Remove member	Grantee loses pet access	P1

Recipient (family member)

ID	Area	Given	When	Then	Priority
FS-07	Family sharing	New or empty Home	Welcome or Profile	Join with invite code discoverable	P1
FS-08	Family sharing	Valid MTCH code	Enter code → sign in if needed	Shared pets on Home	P1
FS-09	Family sharing	Email invite link	Open /accept-invite? token=... → sign in with matching email	Pet on Home	P1
FS-10	Family sharing	Signed in as different user than invite email	Accept email invite	email_mismatch message	P1
FS-11	Family sharing	Owner's own MTCH code	Attempt self-join	Error	P2

Plan gates

ID	Area	Given	When	Then	Priority
FS-12	Plan gates	Free plan	Invite / share	Blocked at invite	P1
FS-13	Plan gates	Free plan, already owns 1 pet	Accept transfer	Blocked	P1
FS-14	Plan gates	Family plan	Invite / accept transfer	Succeeds	P1

Device UAT (two devices)

ID	Area	Given	When	Then	Priority
FS-D01	Device UAT	Cold install	Sign up → Join with Invite Code → MTCH accept	Pets on Home	P1
FS-D02	Device UAT	Owner sends email invite	Recipient opens link → matching email sign-in	Pet on Home	P1
FS-D03	Device UAT	Email invite, wrong account	Accept attempt	Clear error on /accept-invite	P1

ID	Area	Given	When	Then	Priority
FS-D04	Device UAT	Two accounts	Owner removes household member	Grantee loses shared pets	P1
FS-D05	Device UAT	Free test account	Premium gates on invite create	Paywall shown (if enabled)	P2

8. Pet transfer

Source: *docs/TESTING_PET_TRANSFER.md*

Sender (current owner)

ID	Area	Given	When	Then	Priority
PT-01	Pet transfer	Free account	Start transfer	Prompt Premium (pet_transfer_create)	P1
PT-02	Pet transfer	Premium account	Profile → Transfer Ownership → pick pet → reason	Prep snapshot shows weight, meds, last vet	P1
PT-03	Pet transfer	Transfer wizard	Highlight up to 5 journal entries; exclude non-vet-flagged	Same entry cannot be both highlighted and excluded	P1
PT-04	Pet transfer	Transfer ready	Generate code	Format TRF-XXXX-YYYY-####; copy/share; QR; ~14 day expiry	P1
PT-05	Pet transfer	Active code exists	Second code for same pet	Error until first cancelled or expired	P1
PT-06	Pet transfer	Active code	Cancel	Recipient preview/accept fails afterward	P1

Recipient (new owner)

ID	Area	Given	When	Then	Priority
PT-07	Pet transfer	Valid code	Claim a Pet → enter code (case-insensitive)	Step 2 preview loads	P1
PT-08	Pet transfer	Wrong/expired/used code	Enter code	Clear error on step 1 or 2	P1
PT-09	Pet transfer	Logged out on step 2	Attempt accept	Sign-in/sign-up prompt with return to step 2	P1

ID	Area	Given	When	Then	Priority
PT-10	Pet transfer	Free account	Accept transfer	Prompt Premium (pet_transfer_accept)	P1
PT-11	Pet transfer	Valid code	Preview step	Pet name, breed, photo, record counts, journal snippets	P1
PT-12	Pet transfer	Valid code	Decline	Code inactive; sender can create new code	P1
PT-13	Pet transfer	Valid code, Premium	Accept with parent display name	Success step 3; pet in list with records	P1
PT-14	Pet transfer	Same account as sender	Accept own code	Server error (cannot transfer to yourself)	P1

After accept & edge cases

ID	Area	Given	When	Then	Priority
PT-15	Pet transfer	Transfer accepted	Sender views pet list	Pet removed or no longer editable as owner	P1
PT-16	Pet transfer	Transfer accepted	Recipient views health	Records, journal (minus excluded), meds, documents visible	P1
PT-17	Pet transfer	Transfer accepted	Transfer history	Prior owner label respects "show my name" toggle	P2
PT-18	Pet transfer	Transfer accepted	Family access	Old shares cleared; recipient re-invites if needed	P1
PT-19	Pet transfer	Edge notify configured	Create/accept/decline	Email/push notifications sent	P2
PT-20	Pet transfer	Expired code	Accept attempt	Invalid / expired message	P1
PT-21	Pet transfer	Declined code	Accept attempt	Cannot accept; new code required	P1
PT-22	Pet transfer	Deleted pet	Preview/accept	Fails	P2
PT-23	Pet transfer	Vet-flagged journal in exclude list	Create transfer	Blocked at create or RPC	P2

9. Shared daily care (Today rings)

Source: docs/TESTING_FAMILY_SHARING.md, docs/plans/shared-pet-daily-care.md

ID	Area	Given	When	Then	Priority
SDC-01	Shared Today	Owner + shared pet	Owner logs meals/water/output on Home	Rings show non-zero counts	P1
SDC-02	Shared Today	Family member on same pet	Open Home	Identical ring values (not separate empty log)	P1
SDC-03	Shared Today	Contributor role	Bump rings	Updates persist for household	P1
SDC-04	Shared Today	View-only role	Attempt edit	View-only message; cannot edit	P1
SDC-05	Shared Today	Household with walks	Any member completes walk	Streak and daily distance goal count for pet	P2

10. Subscription, pricing & RevenueCat

Sources: *docs/PRICING.md*, *docs/REVENUECAT.md*, *docs/compliance/COMPLIANCE-UAT.md* §7

Pricing v1.5 caps

ID	Area	Given	When	Then	Priority
SUB-01	Pricing	Free user	4th Milo chat	Paywall on 4th	P1
SUB-02	Pricing	Free user	11th document	Paywall on 11th	P1
SUB-03	Pricing	Free user	Manual journal	OK; 3rd AI journal blocked	P1
SUB-04	Pricing	Free user	Vet brief	Teaser only; Individual gets full brief	P2
SUB-05	Pricing	Individual user	Passport export	Works	P1
SUB-06	Pricing	Individual user, 1 pet	Add 2nd pet	Family paywall	P1
SUB-07	Pricing	Family user	6th member invite	Blocked	P1
SUB-08	Pricing	Founding cap reached	Founding purchase	Rejected	P2
SUB-09	Pricing	Prior purchaser	Restore purchase	Plan + badge restored	P1
SUB-10	Pricing	Free user	Add 2nd pet	Blocked	P1

RevenueCat sandbox

ID	Area	Given	When	Then	Priority
RC-01	RevenueCat	Signed in	App launch	syncRevenueCatUser sets RC app_user_id = Supabase	P1

ID	Area	Given	When	Then	Priority
				user id	
RC-02	RevenueCat	Free user	Profile / Compare plans	Shows Free; store prices or fallback	P1
RC-03	RevenueCat	Free user	Subscribe Individual (Apple sandbox)	Profile shows Individual	P1
RC-04	RevenueCat	Purchase complete	Check DB	Webhook row in user_entitlements with correct product_id	P1
RC-05	RevenueCat	Individual user	Add 2nd pet	Family paywall; purchase Family → unlimited pets	P1
RC-06	RevenueCat	Prior purchaser	Reinstall → Restore purchases	Plan restored	P1
RC-07	RevenueCat	Founding SKU available	Purchase founding	is_founding_member = true (cap 500 in DB)	P2

11. Compliance — account deletion, export & retention

Source: docs/compliance/COMPLIANCE-UAT.md

ID	Area	Given	When	Then	Priority
CMP-01	Compliance	Staging DB	Run verify-rpcs.sql	RPCs and pricing v1.5 tables exist	P1
CMP-02	Compliance	delete-account edge deployed	POST schedule	Returns purge_after (~7 days)	P1
CMP-03	Compliance	Scheduled deletion	POST cancel	Clears scheduled deletion	P1
CMP-04	Compliance	Deletion scheduled	Sign in during grace	Succeeds; Profile shows cancel deletion (no auth ban)	P1
CMP-05	Compliance	Populated test account	Profile → Delete account → confirm	account_deletion_requests row with future purge_after	P1
CMP-06	Compliance	Grace period elapsed (staging backdate)	Purge worker runs	User rows gone; account_deletion_log entry; zero residual PII	P1
CMP-07	Compliance	Populated account	Profile → Download my data	Export email with signed link within TTL	P1
CMP-08	Compliance	Export link received	Open and validate JSON	Sections include pets, health, preferences	P1
CMP-09	Compliance	Admin access	Command center → Retention jobs	Recent runs visible	P2

ID	Area	Given	When	Then	Priority
CMP-10	Compliance	Old walk with points (optional)	After worker cycle	points nulled; points_pruned_at set	P2
CMP-11	Compliance	ECS deployed	GET /api/health	supabaseServiceRoleConfigured: true	P1

12. Health documents & exports

Sources: *docs/design/PET_PASSPORT_V2_SPEC.md*, *docs/design/VET_SUMMARY_V2_SPEC.md*

Pet passport PDF

ID	Area	Given	When	Then	Priority
DOC-01	Passport	Travel-ready pet (microchip, rabies, FAVN/titer)	Export passport PDF	Page 2 travel block populated; EU jurisdiction notes mention titer	P1
DOC-02	Passport	Minimal pet (no titer/travel docs)	Export passport PDF	No TRAVEL CERTIFICATES section on page 2	P2
DOC-03	Passport	Device PDF pipeline OK	Export passport PDF	QR renders on page 3	P1

Vet summary PDF

ID	Area	Given	When	Then	Priority
DOC-04	Vet summary	Rich pet (labs, vaccines, baseline, insurance vault)	Generate PDF	Up to 4 pages with lab markers and insurance	P1
DOC-05	Vet summary	Minimal pet (pet + one vaccine)	Generate PDF	Fewer than 4 pages; no empty sheets	P1
DOC-06	Vet summary	Sparse data (no flagged journal, no exams)	Generate PDF	Page 3 omitted entirely	P2

13. Notifications & reminders

Source: *docs/NOTIFICATIONS_5.4_AUDIT.md*

ID	Area	Given	When	Then	Priority
NOT-01	Notifications	Profile Reminders	Toggle journal; change evening hour	Local reschedule reflected in device notification list	P1

ID	Area	Given	When	Then	Priority
NOT-02	Notifications	Vaccination local notification	Tap notification	Opens vaccinations tab	P1
NOT-03	Notifications	Journal prompt notification	Tap notification	Opens pet journal with correct petId	P1
NOT-04	Notifications	Edge scheduled-care-reminders deployed	Run one POST	Dedupe tables prevent duplicate pushes on repeat	P2
NOT-05	Notifications	Vet booking with start_utc in 23–25h window	Reminder window	At most one push per window	P2
NOT-06	Notifications	Vet booking with start_utc in 50–70m window	Reminder window	At most one push per window	P2
NOT-07	Notifications	User disabled document expiry push	Server push attempt	Respects document_expiry_push_enabled	P2

14. Pawthon walk tracking (field test)

Source: *docs/PAWTHON_FIELD_TEST.md*

Setup: Development or production build with native location (not Expo Go). Test each combination of phone mode x environment on the same ~2 km loop.

ID	Phone mode	Environment	Pass criteria	Priority
PAW-01	Hand, screen on	Downtown / urban canyon	Trace overlays within ~10 m vs baseline where GPS good	P1
PAW-02	Hand, screen on	Residential, open sky	Trace overlays within ~10 m vs baseline where GPS good	P1
PAW-03	Hand, screen on	Heavy tree cover	Trace overlays within ~10 m vs baseline where GPS good	P2
PAW-04	Pocket, screen off	Downtown / urban canyon	No long zero-update gaps while moving (note device/OS if killed)	P1
PAW-05	Pocket, screen off	Residential, open sky	No long zero-update gaps while moving	P1
PAW-06	Pocket, screen off	Heavy tree cover	No long zero-update gaps while moving	P2
PAW-07	Backpack / bag, screen off	Downtown / urban canyon	No long zero-update gaps while moving	P2
PAW-08	Backpack / bag, screen off	Residential, open sky	No long zero-update gaps while moving	P2
PAW-09	Backpack / bag, screen off	Heavy tree cover	No long zero-update gaps while moving	P3

15. Maestro device E2E flows (automated UAT)

Source: `.maestro/README.md` — Milo AI intentionally out of scope

ID	Flow file	Description	Pass criteria	Priority
MAS-01	login-email.yaml	Email login	User reaches authenticated Home	P1
MAS-02	add-first-pet-start.yaml	Onboarding step 2 only	Pet type/country step completes	P1
MAS-03	add-first-pet-complete.yaml	Full onboarding steps 1–9 + save	Pet saved and visible on Home	P1
MAS-04	join-household-mtch.yaml	Family sharing MTCH	Recipient sees shared pets	P1
MAS-05	accept-email-invite.yaml	Email invite deep link	Pet appears after accept	P1
MAS-06	claim-pet-trf.yaml	Pet transfer TRF	Recipient owns pet after accept	P1
MAS-07	messages-inbox-smoke.yaml	Messages inbox	Inbox loads without crash	P1

Prerequisites: Maestro CLI, seeded accounts (`pnpm run maestro:seed`), staging/local Supabase + API.

16. Legal & store (non-code)

Source: `docs/compliance/COMPLIANCE-UAT.md`

ID	Area	Checklist item	Priority
LEG-01	Legal	Counsel TTL sign-off on retention windows	P2
LEG-02	Legal	Published privacy policy lists subprocessors	P1
LEG-03	Legal	App Store / Play data forms updated per store disclosures	P1

Summary statistics

Category	Test case count
Auth & onboarding	6
Email inbound & sender	10
Review Inbox	7
Resolve API	6
Admin portal	12
Email production smoke	4

Category	Test case count
Family sharing	19
Pet transfer	23
Shared daily care	5
Subscription & RevenueCat	17
Compliance	11
Health documents	6
Notifications	7
Pawthon field test	9
Maestro E2E	7
Legal / store	3
Total	152
